Mini-project - DD2417 - NLP
Question word prediction

Tristan Perrot   Romain Darous

March 2024

Abstract

This report presents the results of the mini-project for the course DD2417 - Natural Language Processing at KTH. The goal of the project is to predict the question word of a question given the rest of the question and the answer. We present the dataset, different models and the results of the project. We also discuss the limitations of the model and the possible improvements that could be made.
